

## *Acropyx – Live ranking for acrobatic paragliding competition*

The goal of this project is to provide live ranking for acrobatic paragliding competition with a tool for managing competitors, judges, manoeuvres and warnings and for showing live results on a big screen.

Acropyx is composed of 2 web applications that run with most of the modern browsers<sup>1</sup>. Acropyx.com host a cloud version of this project with multi tenants support<sup>2</sup>.

### **The “Admin” web application**

At setup phase, an “administrator” can:

- Administer the pilots and the teams
- Administer the judges with their access rights
- Setup competitions with mark definitions, manoeuvres and runs
- Import data from Excel files

During the competition, the “event manager” can:

- Start/end competitions, runs and flights
- Enter manoeuvres done for each flight with a fast and intuitive user interface
- Review the marks of all judges
- Control the big screen that displays live results
- Add warnings to pilots

With admin rights, you can:

- Edit any data to fix typing errors or any “live” issue

And the judges can:

- Mark the current flight according to the competition setup

### **The “Displayer” web application**

This web application displays the live results like:

- Pilot or team profile
- Current flight marks with visual animations
- Intermediate/final run and competition ranking
- Live messages

Computers with a web browser in full screen mode can easily send live results to a connected big screen.

1. Acropyx is fully tested only with Google Chrome for now.
2. To save hosting cost, acropyx.com is only enabled on-demand during the development phase.
